September 19, 2018

Dear Webutuck Families,

We now have completed the inspection, testing and monitoring by an independent industrial hygienist at all facilities in the District.

The hygienist has informed the District that it is his opinion that the High School and Intermediate School presents a normal fungal ecology. In layman's terms, this means that both of these schools there is no immediate action needed for mold remediation. We will continue to address maintenance concerns as needed using our available district staff.

As I stated in an earlier correspondence, testing was completed at the Webutuck Elementary School on Tuesday, September 18th. It was important to me and to the Board of Education to have data from that testing as soon as possible and I directed the inspection company to get immediate results. I received the results a little after 3:00 a.m. this morning and I have directed action based on those results. Those actions are as follows:

- We have engaged a professional restoration company to resolve on going environmental concerns through the use of commercial equipment.
- I have directed that the entire school will be cleaned top to bottom to the highest standards, which will be verified by our third party inspector.
- The work will commence at the close of business Friday and will continue non-stop until work is completed Sunday evening

The safety and health of the faculty, staff and students of all district buildings is the top priority of my office. Once these environmental concerns were brought to my attention, immediate action was taken and I will continue to keep the community updated as to our progress. I will make all documents related to air testing available on our District website once they are provided by our inspector.

Sincerely,

Raymond Castellani
Superintendent
